 Aleo Testnet  Private voter records  On-chain settlement

Published Verity site with the connected QA Shield account. Home, market and documentation share one URL. No transaction is implied by the overview.

Actual mapping lookup found no market at fresh ID 202610031. Its suggested assertion ID is 2026100304; earlier QA state is preserved.

Slide 3 | VER-04 | Verity Prediction Market

MARKET CREATOR

Define a binary question

Human-readable question

Did the public demo assertion 2026100301 appear on Aleo Testnet on 2026-10-03?

Canonical YES claim

Canonical NO claim

Demo assertion 2026100301 appeared on Aleo Testnet on 2026-10-03

Demo assertion 2026100301 did not appear on Aleo Testnet on 2026-10-03

The question and both canonical claims are hashed locally; those hashes bind oracle settlement.

GRACE PERIOD ENDS

20,156,385

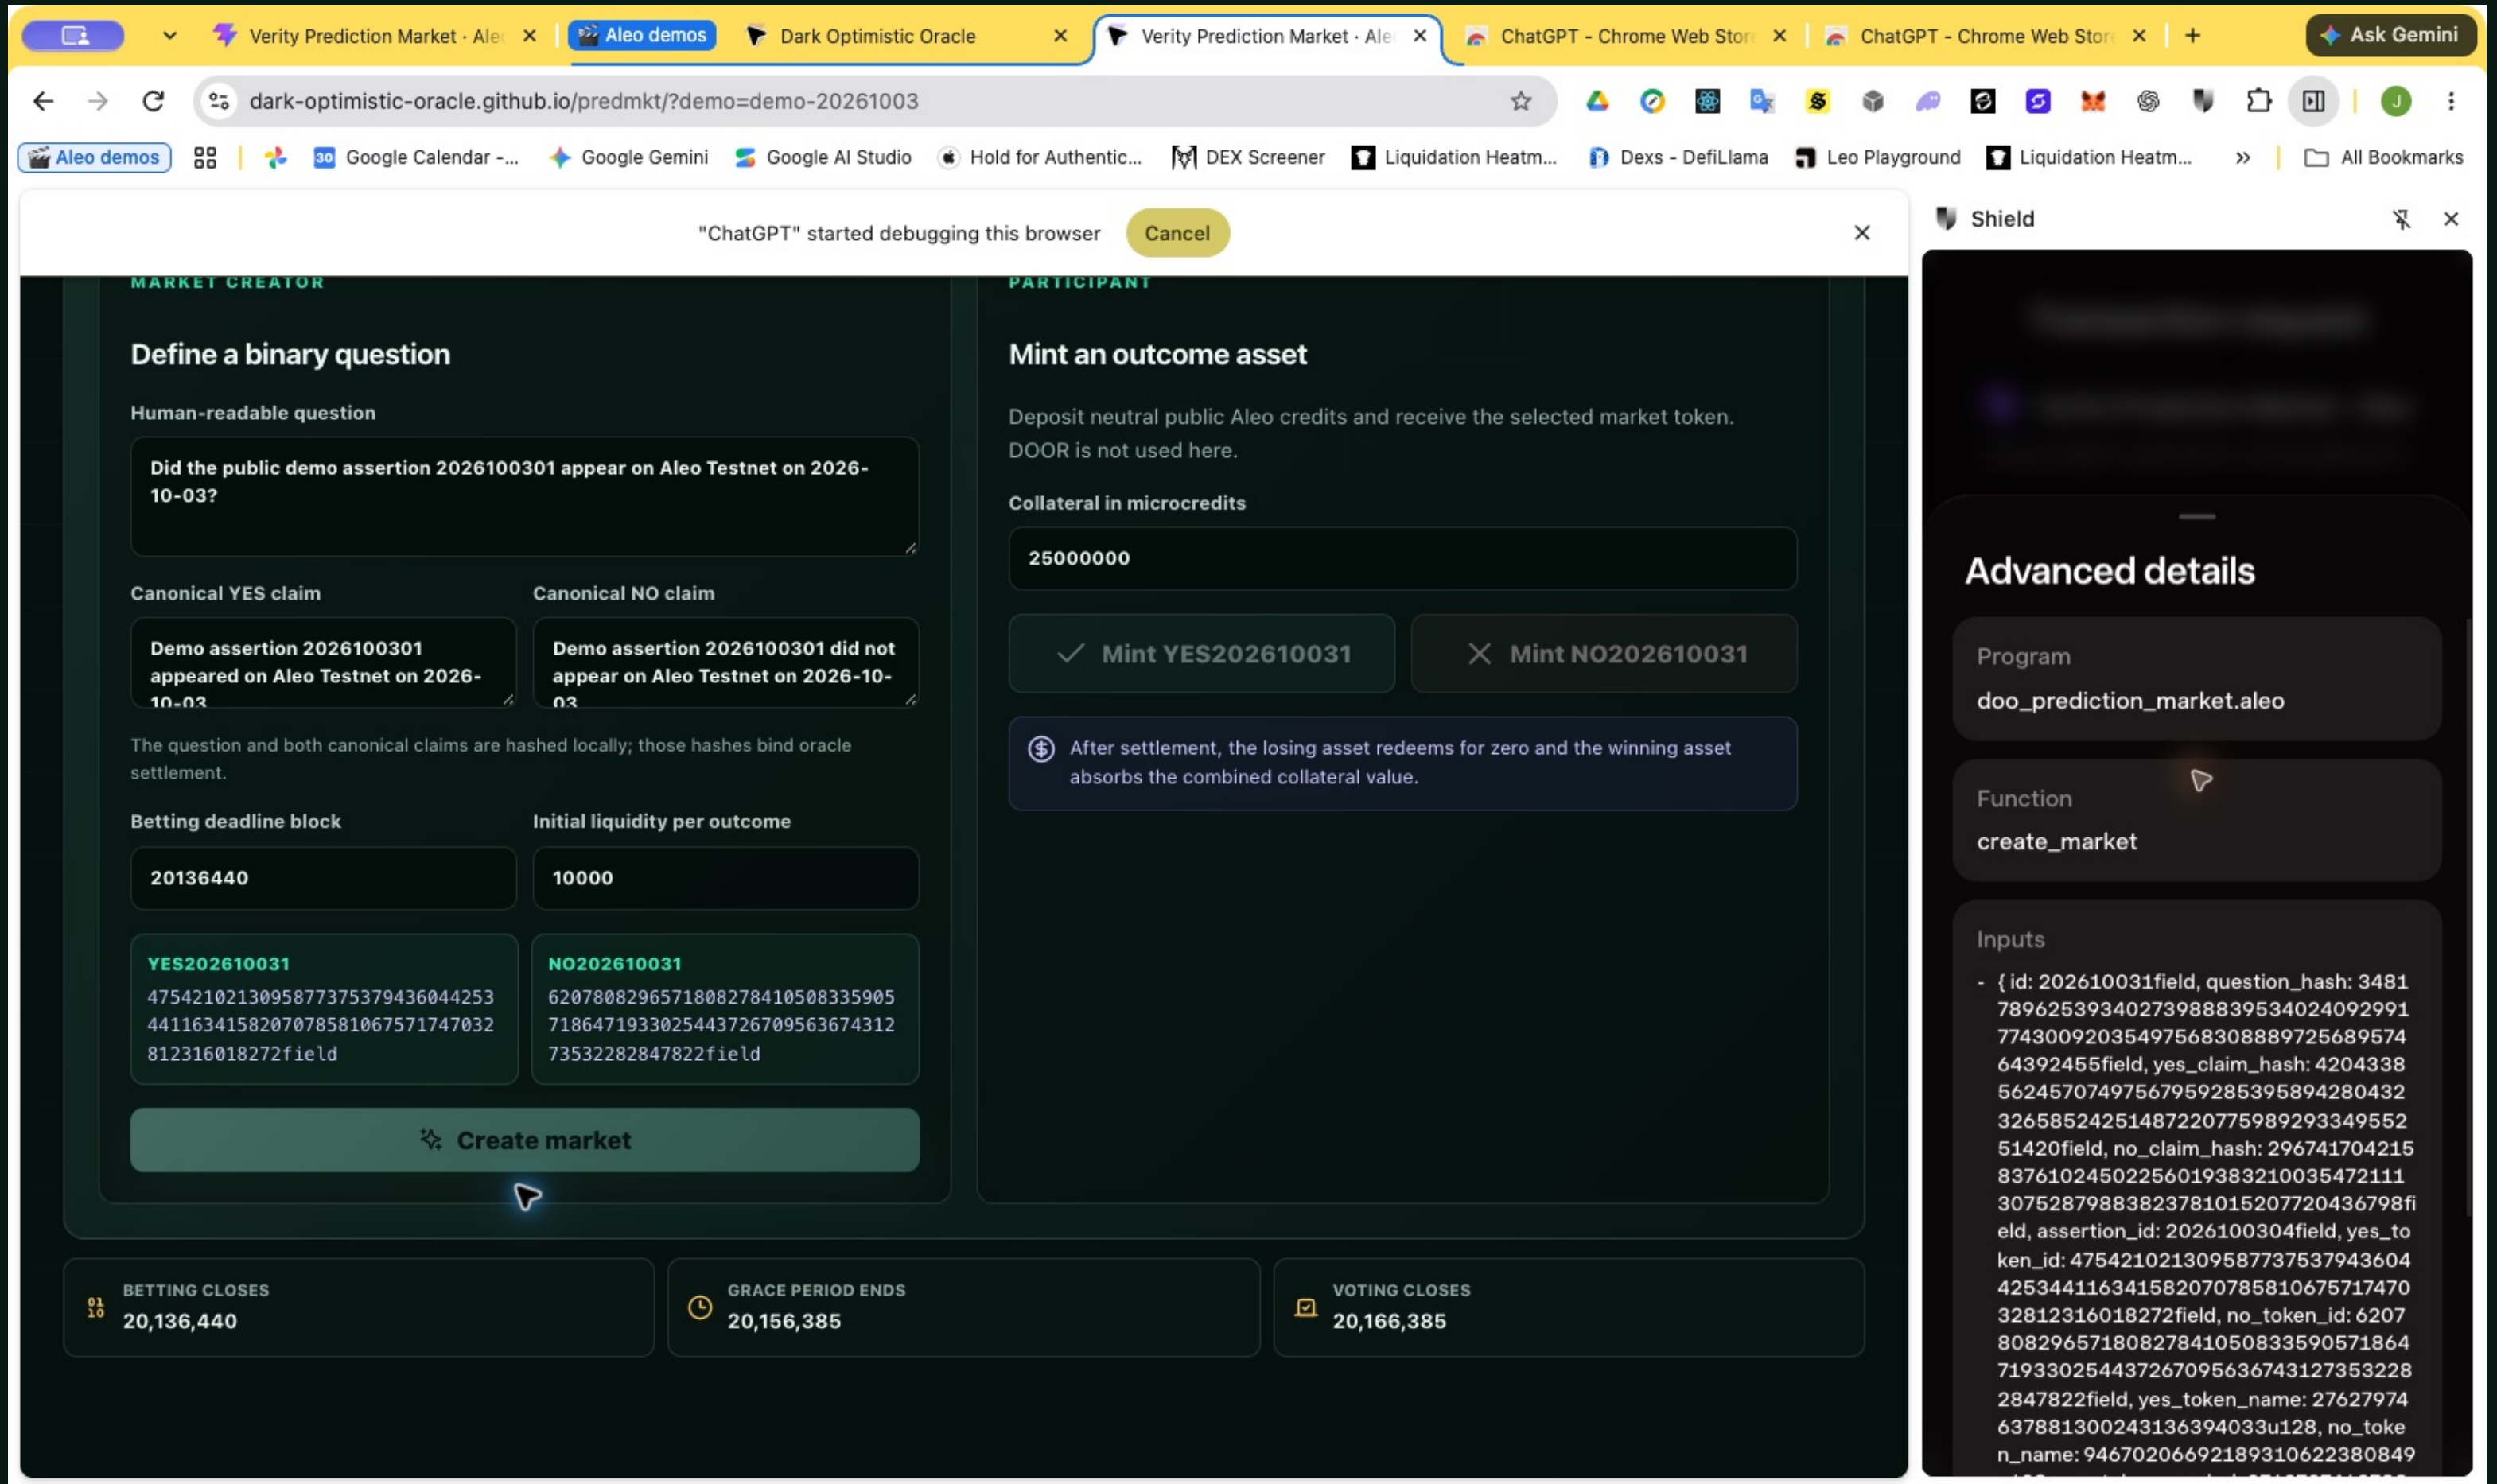

📅

VOTING CLOSES

20,166,385

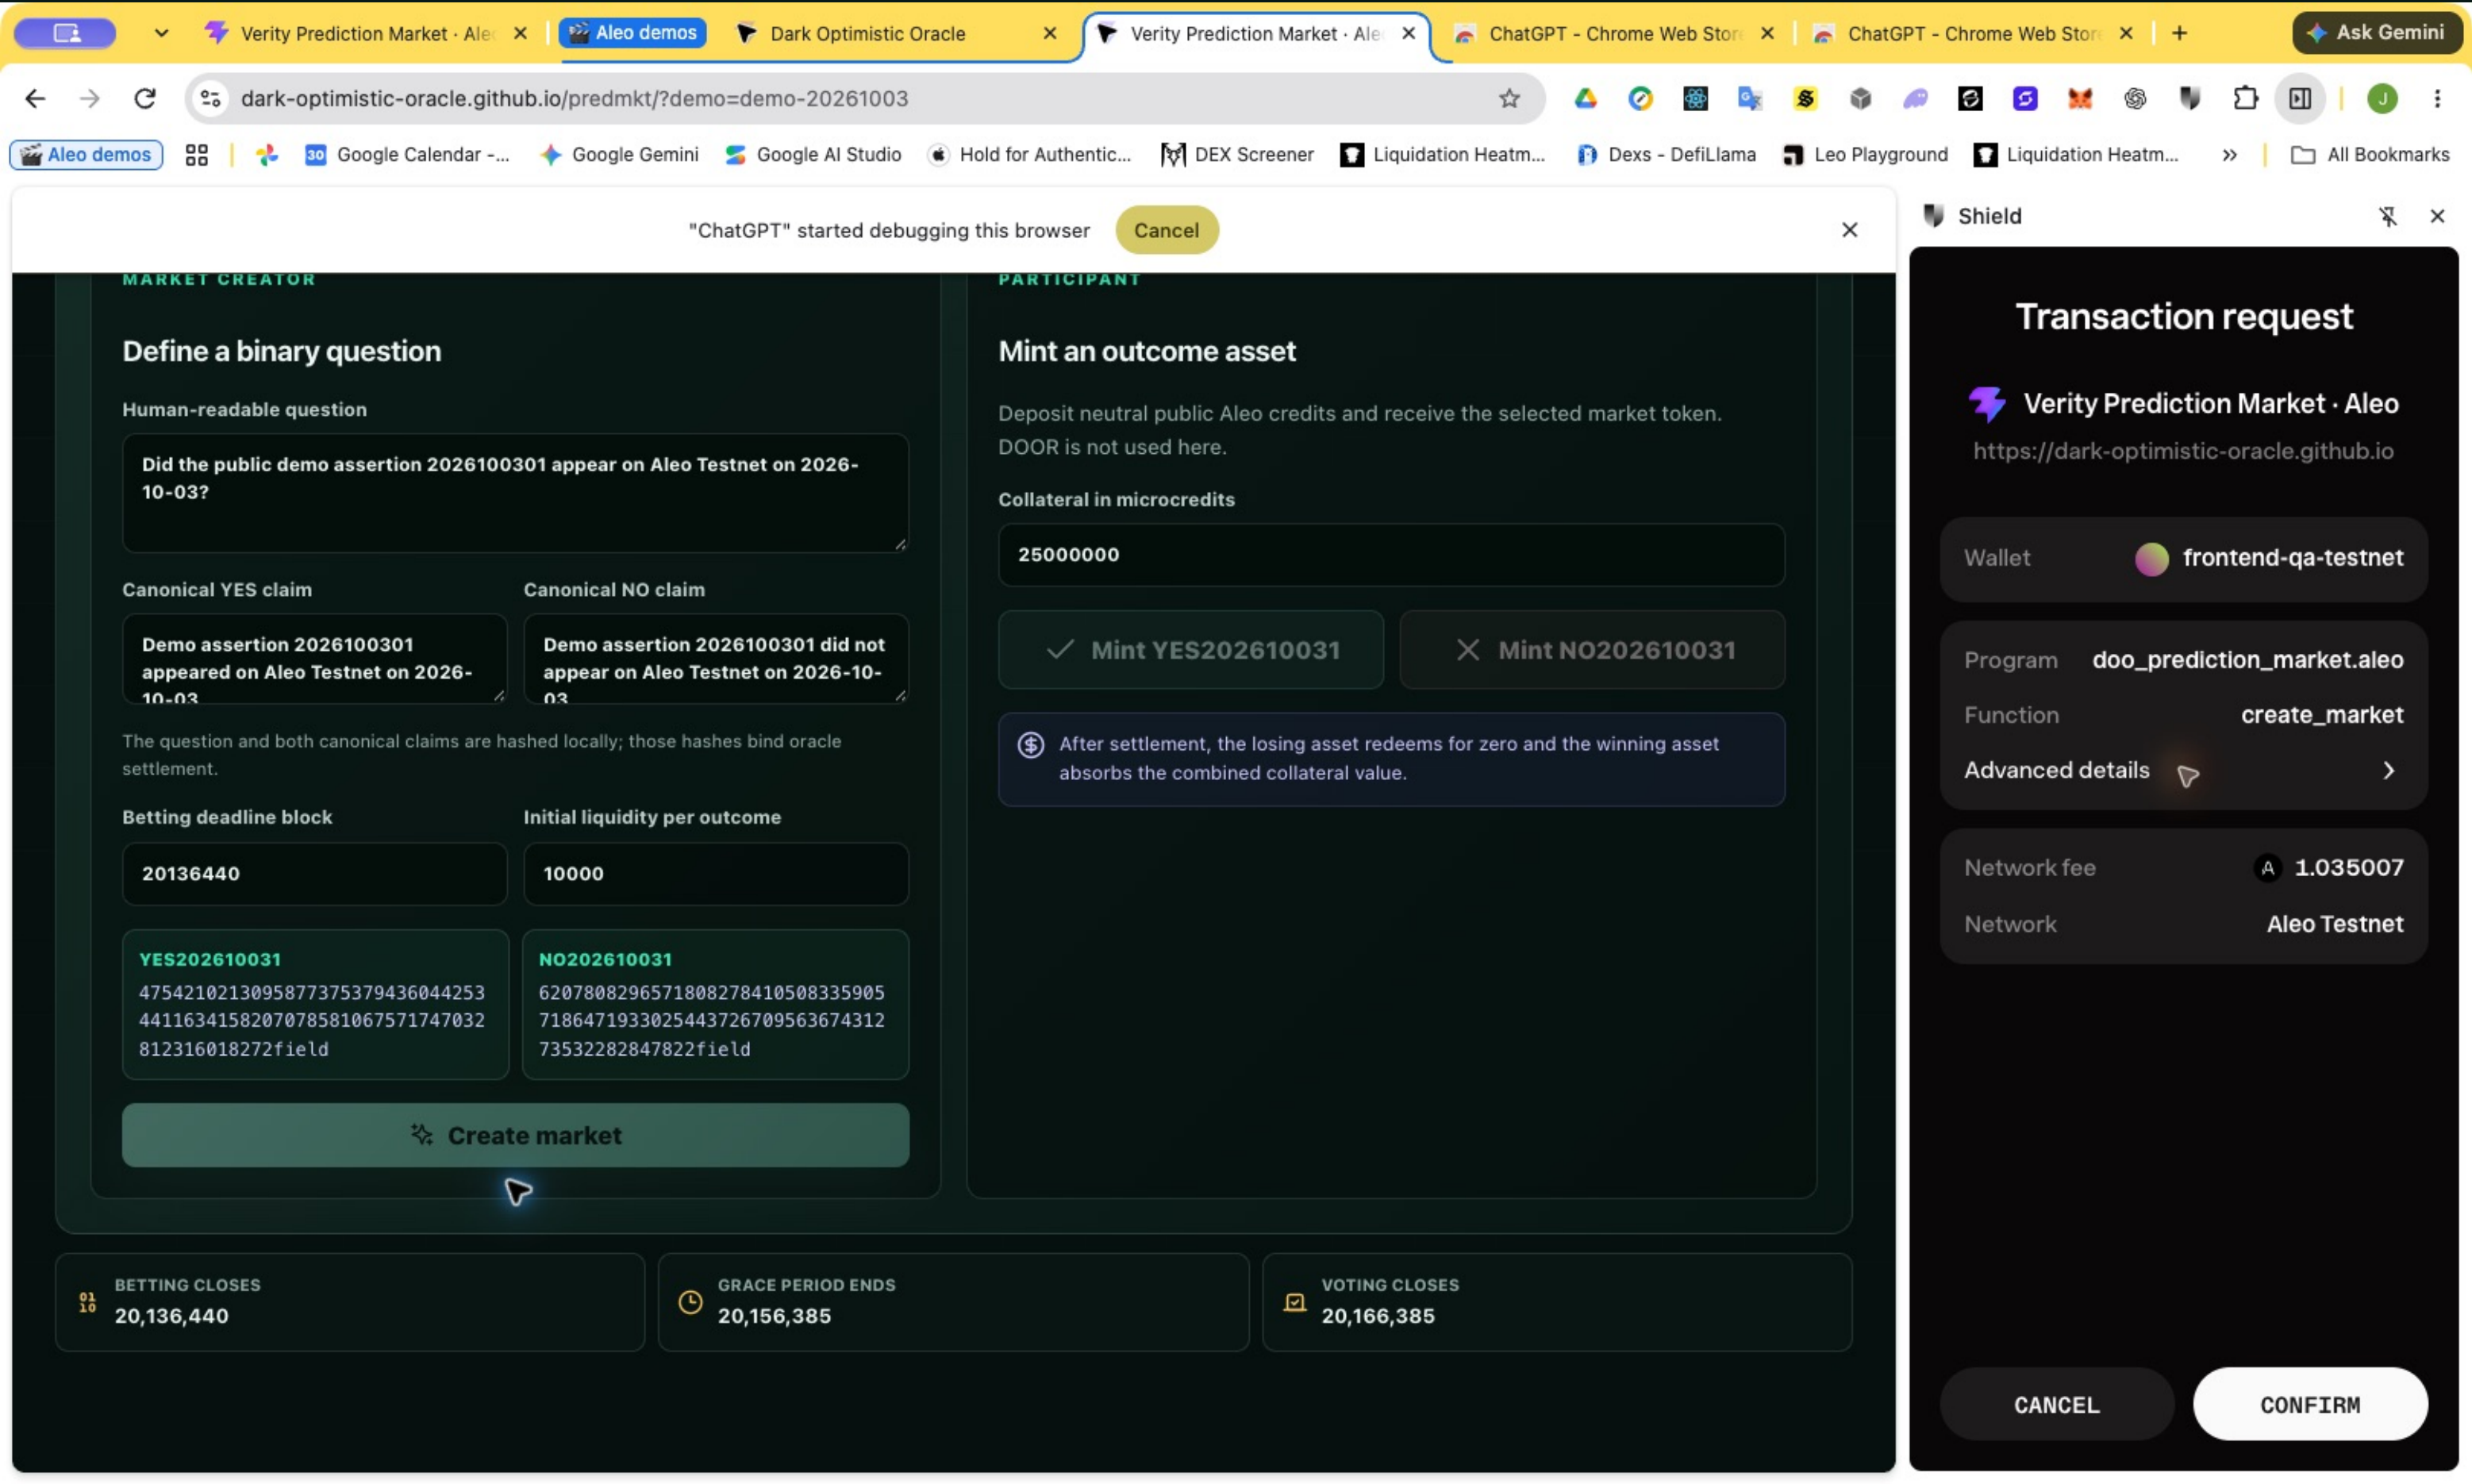

The binary question binds whether demo assertion 2026100301 appeared on Testnet. Distinct canonical claims are hashed; initial liquidity is 10000 microcredits per outcome and betting closes at 20136440.

Slide 4 | VER-04 | Verity Prediction Market

Shield received `doo_prediction_market.aleo/create_market` with the `MarketConfig` and `10000u64` liquidity. Exact public inputs are in `LOG.md`; wallet review alone does not prove acceptance.

Slide 5 | VER-04 | Verity Prediction Market

Actual market creation approval screen. Shield displayed a 1.035007-ALEO network fee; the transaction subsequently reached Testnet acceptance.

LIVE PROTOCOL DEMONSTRATION

Predict freely.

Settle fairly.
